

Healthy Eating

A good diet is important for good health. Eating a variety of foods can help you manage your weight, improve general wellbeing and reduce the risk of conditions including heart disease, stroke, some cancers, diabetes and osteoporosis (thin bones). All you need to do is eat sensibly, choosing a range of foods in the correct proportions.

Food groups

The Food Standards Agency (FSA) Eatwell Plate is made up of five food groups – simply choose a variety of foods from each group.

2. Five portions - have *at least* five portions of fruit and vegetables each day.

Remember:

- **fresh**
- **frozen**
- **dried**
- **canned**
- **juices**

all count towards your total. Also remember to include the vegetables you add to cooked dishes, for example as onions in a stew or casserole and tomatoes in a pasta sauce or tomato soup.

The eatwell plate

Use the eatwell plate to help you get the balance right. It shows how much of what you eat should come from each food group.

In practical terms this means:

1. Plan your meals/snacks around starchy foods such as bread, chapattis, breakfast cereals, potatoes, rice, noodles, oats and pasta. Aim to include one food from this group at each meal time.

3. Variety – eat a variety of different types and colours of fruit and vegetables. This is because different coloured fruit and veg contain their own combination of vitamins and minerals, so try to include a variety of colours in your diet.

“ Choose a variety of foods from each of the five food groups on the eatwell plate. ”

4. Meat, fish, eggs and pulses (beans and lentils)

should be eaten in moderate amounts. Choose lean cuts of meat or remove excess fat and remove the skin from chicken. Avoid frying where possible. Try to include two portions of fish each week, one of which should be an oily fish, for example: mackerel, trout, sardines, kippers or fresh tuna.

5. Dairy - aim for a pint of milk a day, or the equivalent.

For example the following contain the same amount of calcium as 1/3 pint of milk:

- a small pot of yoghurt
- a small matchbox size piece of cheese
- six and eight cups of tea or coffee, with milk a day

Try to choose reduced fat versions where you can – for example semi-skimmed milk, low fat yoghurt, cottage cheese and half fat Cheddar cheese or Edam.

6. Sugar and fat should be limited so watch your intake of foods high in fat and sugar, choosing low fat or reduced sugar foods where possible.

When using a spreading fat choose one that is low in saturated fat. Saturated fat increases the low density (LDL) lipoproteins or 'bad' cholesterol in your blood which can lead to heart disease. Instead choose unsaturated fats which contain high density lipoproteins (HDL) or 'good' cholesterol that is beneficial for your body.

Summary

Eat a range of foods from the five food groups to make sure you have a balanced diet. Eat the right amount of food for how active you are. Most of all – enjoy your food!
